— STREAM

The Origins.

STREAM was founded by a group of companies to give a global answer to the market of renewable energies. This new dimension integrates different knowledge, experience and complementary managing skills.

The purpose is to find in this union a greater strength, efficiency and knowhow, more than what the different parts could separately generate.

— ENERGY & ENVIRONMENT

Stream Today.

We share perspectives and objectives with 6 firms, more than 70 internal professionals and a wide network of external collaborators, a successful enterprise in the solar power and hydroelectricity fields.

STREAM offers its complete or partial services in Italy and abroad, with projects and permits, supplies, EPC, assets and project management.

— CONSOLIDATE & GROW

The Mission.

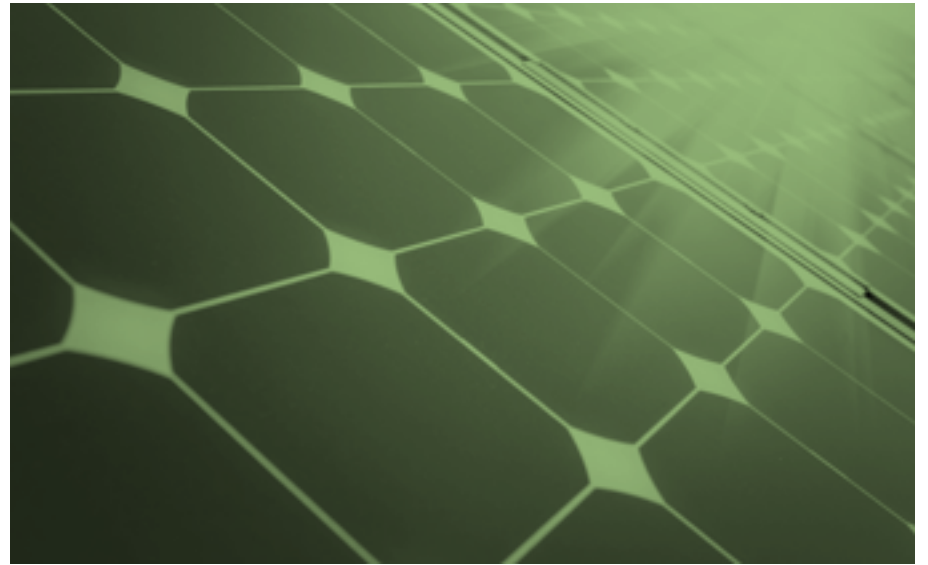

STREAM supports cooperation by an organic structure, unified and stable, where are promoted and valued flexibility and the exchange of different resources, talents and competences, both as for field and experience.

The objective is oriented towards the creative generation of practical solutions to concrete problems in the energy and environment sector.

— THE FUTURE IS TOGETHER

A Vision in Six points of view.

Solar Modules

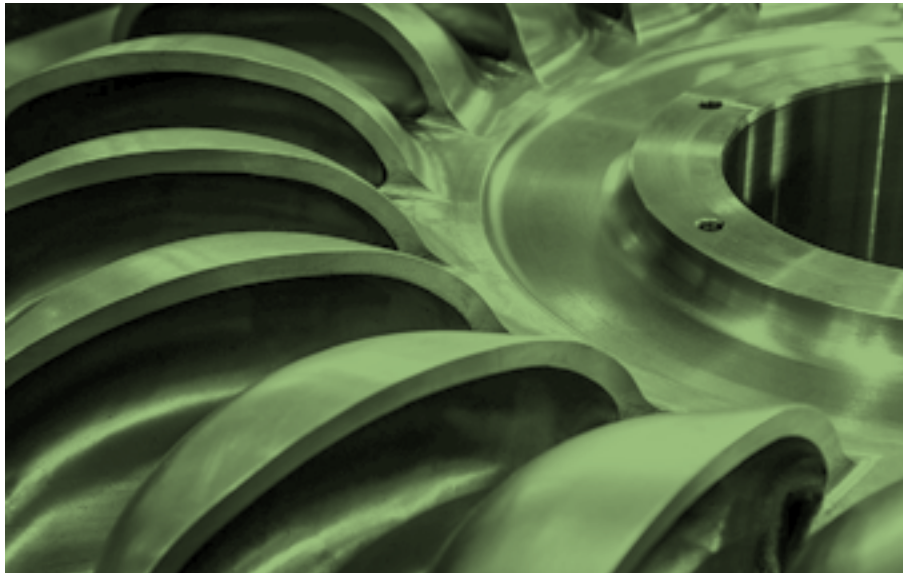

The development of renewable energies for ethical, transparent business and sustainable exchange, where care of the environment generates a complete and conscientious growth, thanks to a daily self-aware action.

We pursue a listening attitude and use the best technologies to satisfy client needs, adding to our work time lasting reliability.
