stream
energy and environment

— STREAM

The Origins.

STREAM was founded by a group of companies to give a global answer to the market of renewable energies. This new dimension integrates different knowledge, experience and complementary managing skills.

The purpose is to find in this union a greater strength, efficiency and knowhow, more than what the different parts could separately generate.

— INTRO

Services & Activities.

STREAM offers the following services and activities:

- Project Development
- Due Diligence – Sell/buy side
- Advisory – Technical, financial, legal, economic
- Plant Check-Up - Performance
- Asset Management
- Project Controller/Monitoring

— SINERGIES

“Mild is the work if it’s shared by many.” (Homer)

SERVICES

Renewable Energy advisory & development.

STREAM supports Funds and Owners of Renewable Energy Plants in Italy (photovoltaic, wind, biomass, hydro and micro-grid), in any need of technical-financial evaluation of Projects both on the national Secondary market (M&A) and on the Primary. Thanks to the in-depth knowledge of the entire chain of financial management and enhancement processes of complex operations, it is able to offer a complete and integrated assistance service in all phases of project development or evaluation of the same; from preliminary analysis of technical, administrative and economic-financial feasibility to technical, financial and fiscal due diligence. As Technical Advisor, STREAM can build on the long professional experience gained in the Renewable sector.

— SERVICES

Due Diligence.

The technical Due Diligence is developed both by means of desk analysis and through site inspections and includes, among the main services:

The urban and environmental compliance of the works, as well as the verification of technical-administrative procedures such as, among others, access to the incentives provided for by national legislation.

The correct formulation of the technical project and its compliance with the documents absent from the bodies involved in the authorization procedures.

The independent estimate - through dedicated software - of the producibility achievable by the plant in the long term.

— SERVICES

Plant performance & asset management.

The revision of the main project data referring to both the construction and maintenance phases, with particular attention to the completeness of the services offered by the Contractor and the related performance guarantees.

Historical analysis of production and consumption data for the determination of performance and assessment of compliance with contractual constraints.

Analysis of the technical-economic elements of the initiative, aimed at reviewing the inputs in terms of costs and revenues of the financial model.

Analysis of the tax regime and taxes due.
